IDENTIFIERS	Florida; *Miami Dade Community College FL

ABSTRACT

This report provides an update on the historical tracking of Associates in Science graduates by program. The data cover a 14-year span, and are helpful in looking at program trends and effectiveness. The report includes two types of tables. Tables 1-10 summarize data for A.S programs and comparisons of Florida's Miami-Dade Community College (M-DCC) with other state public community colleges. Tables 11-63 show 14 years of detailed information for all A.S. degree programs offered. Research finds that of the 53 programs in existence at M-DCC, 41 had placement rates of at least 75%, while 12 programs fell below 70%. Table 3 shows the 10 programs with the highest number of graduates, which account for two-thirds of total A.S. programs. Table 5 lists programs with highest in-program enrollments for 1998-97. Average enrollments exceed 5,400. Nursing is found to be the largest program. It is 2.6 times larger than its follower, Business Administration and Management. When compared to other Florida Community Colleges, M-DCC had the most graduates (1,260 or 13.1% of the entire state system). Of 1981 A.S. graduates, 31% transferred to the State University System (SUS). Ten years later 33% were continuing education. However only 10% of those are at the SUS, while 1.7% are at private universities and 21% are at community colleges. M-DCC serves 28% of the minority total for the Florida community college system, the largest amount system-wide. Forty percent of Hispanic A.S. students attend M-DCC. (PGS)

PERFORMANCE REVIEW: ASSOCIATE IN SCIENCE PROGRAMS

Report Years 1984-85 Through 1997-98

Highlights of the Report

This report updates the historical tracking of Associate in Science graduates by program. The data span fourteen years, beginning in 1984-85 and are useful in examining program trends and program effectiveness. Program enrollment data include students who have earned at least 17 college credits, nine of which are in the major field. Success factors include number of graduates and the percent of graduates placed in related jobs or continuing education. The pool used in calculation of placement rate consists of graduates who could be found and who otherwise met state defined criteria.

Some findings for the 1996-97 Associate in Science graduates:

- There were 1,262 Associate in Science graduates in 1996-97. Of these, 84% or 1,060 graduates made it into the pool used for the placement rate.
- Of those graduates in the pool, 96% or 1,019 were successfully placed.
- There were 26 of 53 programs that attained a 100% placement rate.
- Forty-one programs achieved placement rates above 70%. Of the twelve programs falling below that rate, eleven had zero graduates.
- The most popular programs retained this position across time and are generally in the same rank order. The largest programs in order of enrollment size are Nursing (1,215), Business Administration & Management (480), Computer Information Systems Analysis (409), Legal Assisting (351), and Child Development & Education (347).
- Nursing, the largest of M-DCC's programs, had 378 graduates.
- The ten A.S. programs with the most graduates account for 66% of program enrollments, 69% of graduates, and 71% of placements.
- Ten programs had fewer than fifteen enrollments in 1997-98.
- Twenty-eight programs had fewer than ten graduates in 1997-98. Most have a history of low completions. These are detailed in the report.
- M-DCC had the largest number of A.S. graduates in the state and produced 13.1% of all A.S. graduates in the Community College System.
- Seven Florida public community colleges enrolled 63% of the statewide total Associate in Science in-program enrollments in 1996-97.
- The largest Associate in Science in-program enrollments are at Florida Community College at Jacksonville (7,463 or 12.8%), Valencia (6,672 or 11.4%), and Miami-Dade (5,447 or 9.3%).

- M-DCC serves the largest number and percent (4,102 or 28%) statewide of the combined Black and Hispanic A.S. in-program enrollments; FCC at Jacksonville, the second largest in this category, serves about one-half as many (2,258 or 15%).
- The top seven largest community colleges have 82% of the state's Black and Hispanic A.S. program enrollments.
- The state's largest Black community college program enrollments are at FCC Jacksonville (23.5% of the Florida Community College System) and at M-DCC (18% of the System).
- Miami-Dade Community College has the largest Hispanic program enrollments (40.5% of the Florida Community College System), followed by Valencia (17.5% of the System).

Rationale and Purpose

In recent years, the Florida legislature created landmark legislation that heavily impacted vocational programs at the state's public community colleges. Effectiveness and outcomes funding are linked to performance measures. As a result of the mandates, Miami-Dade Community College further accelerated the development of initiatives to strategically position the College and the workforce of this community for the challenges of the 21st century. Identified growth fields and programs, curricula, and courses were the focus for restructuring to accommodate the trends in economic needs. Streamlining and integration of programs, accompanied by state-of-the-art delivery services, were critical targeted goals. Results of partnerships and new approaches will indeed be reflected in data collected in subsequent years.

The Performance Review: Associate in Science Programs updates the historical tracking of A.S. graduates of Research Report 93-14R. This volume covers college-wide accountability details for 53 programs beginning in 1984-85 through 1997-98. These long-term statistics give evidence of program trends and provide information about the effectiveness of each A.S. program.

Definitions

This performance review presents a historical account, which spans fourteen years commencing in 1984-85, when new vocational legislative accountability mandates were implemented. Data variables in the tables are at times specifically defined by the State's reporting system and at other times by the College's internal system. Definitions are noted in table footnotes. Changes in definitions occurred across the years, as new requirements were put into effect and these changes often impact the data of the year the change occurred and/or in subsequent years.

Enrollment data consist of in-program counts of students. Students are in-program when they have earned at least 17 college credits, nine of which are in the major field. Success factors - number of graduates placed in related jobs or continuing their education - are displayed across the range of years under the heading "placed." Beginning with 1996-97 graduates, job placement data were enhanced with supplemental data collected by local surveys of the College's program managers. Fall Term declared enrollments are also provided for both the Associate in Science and its Associate in Arts counterpart (if any) to indicate the magnitude of interest in the program field. Summary tables at the front of the report give an overview of the most recent performance of all A.S. programs.

BEST COPY AVAILABLE

Findings

There are two categories of tables in this report. Tables 1-10 contain summary data for A.S. programs and comparisons of M-DCC with the state's other public community colleges. Tables 11 – 63 present 14 years of detailed data for each and every Associate in Science program that was active in Fall Term 1997-98. Table 1 highlights performance factors for 1996-97 graduates of Associate in Science programs. The programs are arranged alphabetically and give the percent of the graduate pool that was placed. Due to recent local surveying efforts, 84% of graduates were kept in the pool in 1996-97 as opposed to 70% in 1995-96. There were 1,262 Associate in Science graduates in 1996-97 and 1,060 of them made it into the pool. From this pool of graduates, 96% were successfully placed. The criteria by which graduates are included in the pool is discussed under "Methodological Issues" (last section of narrative).

Table 2 shows placement data sorted by placement rate. Of the 53 programs in existence at M-DCC, 41 programs attained placement rates of at least 75% while twelve programs fell below 70%. Graphic Design Technology had a 55% placement rate and eleven programs had 0% placements. Among these latter programs, nine had zero graduates. There were 26 programs with 100% of the pool of graduates placed. Many graduates did not make it into the pool. If percents were recalculated using all graduates, the yield would show: Automotive Service Management Technology (42% placement), Business Administration & Management (62%), Interior Design Technology (45%), Interpreter Training for Hearing Impaired (60%), Photographic Technology (33%).

Table 3 displays ten programs with the highest number of graduates in 1996-97. These programs are listed in descending order – Nursing (378), Child Development & Education (99), Legal Assisting (75), Business Administration & Management (50), Dental Hygiene (49), Electronics Engineering Technology (49), Physical Therapist Assisting (49), Computer Information Systems Analysis (46), Radiography (39), and Office Systems Technology (38). The aggregation of four Nursing programs totaled 1,215 enrollments and the aforementioned 378 completers. The ten programs shown in Table 3 account for about two-thirds of total Associate in Science in-program enrollments, close to 70% of the graduates, and 71% of successful placements for the College's programs. Most, but not all, of the programs having high completions are also the top programs for size of enrollments.

Table 4 gives four years of data (1994-95 through 1997-98) for the 28 Associate in Science programs with fewer than ten completions in 1997-98. Programs in this table generally show either erratic graduation numbers across the years or consistently low completions. Only programs in existence for at least four years are shown.

Table 5 consists of programs with the highest in-program enrollments, organized by the size of 1997-98 enrollments. To be counted as enrolled in a program requires the accumulation of 17 college credits, 9 of which are in the major field. Across the four years, the average in-program enrollments exceeded 5,400 and the top ten programs accounted for about two-thirds of this enrollment. The 1997-98 data for the top ten programs are Nursing (1,175 in-program enrollments), Business Administration & Management (442), Computer Information Systems Analysis (442), Legal Assisting (338), Child Development & Education (318), Electronics Engineering (245), Dental Hygiene (153), Criminal Justice (129), Office Systems Technology (127), and Radiography (112). These programs retained their popularity across time and are generally in the same rank order each year. The largest program, Nursing, is 2.6 times as large

BEST COPY AVAILABLE

as the second largest, Business Administration & Management. Computer Information Systems Analysis and Dental Hygiene show an unbroken growth trend.

Table 6 features the programs with fewer that fifteen enrollments in 1997-98. There are ten of these programs. With one exception, Environmental Science Technology, these programs have been in existence for many years. Trend declines are evident for Drafting and Design Technology, Health Services Management, and perhaps for Graphic Arts Technology.

Table 7 gives the distribution of Associate in Science program clusters on the campuses. The associated PSAV programs (not shown) are similarly structured under these clusters. Organization of programs into clusters, headed by one campus, is a fairly recent event. Clusters consist of related programs/disciplines. There are nine schools among these ten clusters. North Campus directs four clusters – School of Criminal Justice, School of Entertainment Technology, School of Fire and Environmental Sciences, and Funeral Services. The School of Design Technology at Kendall Campus consists of 14 programs. Wolfson Campus heads the School of Business and Computer Information Systems. The School of Allied Health and the School of Nursing are both housed on the Medical Center Campus. These two schools shepherd 19 medically-related A.S. programs. The School of Aviation and Visitor Services is directed at the Homestead Campus. Consolidated in this group are the three aviation programs as well as a travel and hospitality program. InterAmerican Campus has the School of Education.

Tables 8-10 display Miami-Dade Community College statistics compared to Florida's other public community colleges. Table 8 shows the colleges with the largest number of Associate in Science completions for the 1996-97 report year. There were 9,638 A.S. graduates from the 28 community colleges. Miami-Dade had the most graduates - 1,260 or 13.1% of the state system. This was followed by Broward Community College with 7.9% and St. Petersburg Community College at 7.5%. These ten colleges produced 67% of the Associate in Science graduates in the Florida public community college system.

Although the Associate in Science degree is not intended as a transfer degree and is not protected by Florida Articulation Agreements, these graduates, nevertheless, do transfer to the State University System as well as other in-state and out-of-state public and private universities. To give some perspective to developments in the continuing education status of Associate in Science graduates, 31% of the 1981 M-DCC A.S. graduates transferred to the State University System within a year of graduation (R.R. No. 87-25). More than a decade later, 33% of A.S. graduates were continuing their education but the proportion attending the SUS has decreased to 10%, while 1.7% transferred to private universities, and 21% returned to the community colleges (I.C. 93-13C). Considering the high mobility of the American population, we believe the transfer rate to universities is likely to be higher; however, no systematic studies have been conducted for those who transfer out-of-state. Table 9 presents Florida Community College System transfer data of Associate in Science graduates for one term. The data for Fall Term 1996 shows 258 A.S. graduates transferring to the Florida State University System. Of these, the largest number of transferees graduated from Miami-Dade (56 or 22%), followed by 26 graduates or 10% from Florida Community College at Jacksonville. This report does not deal with Associate in Science students who transferred to the SUS before degree acquisition.

Table 10 shows ethnic data for the Associate in Science degree in-program enrollments. Data are summarized for the colleges with the largest A.S. enrollments in the Florida Community College System for the 1996-97 - report year. These seven colleges are sorted by the size of the combined Black non-Hispanic and Hispanic enrollments. There were 58,349 Associate in

BEST COPY AVAILABLE

Science students in Florida's community colleges in 1996-97. Of these, seven community colleges enrolled 63% of the Associate in Science students. The largest total A.S. in-program enrollments are at Florida Community College at Jacksonville (7,463 or 12.8%), Valencia (6,672 or 11.4%), Miami-Dade (5,447 or 9.3%); Broward and St. Petersburg had 7.9% of the A.S. program enrollments.

Of the combined Black and Hispanic groups, Miami-Dade Community College serves nearly 28% of the Florida Community College System minority total, the largest systemwide. The second largest of this combined group, Florida Community College at Jacksonville, serves almost half as many - 15%. This rate quickly diminishes to single digits with the fifth largest, Hillsborough at 7.7%. Even at this, these seven colleges enroll 81.6% of the system's total Black and Hispanic students.

Florida Community College at Jacksonville has the largest proportion of Black A.S. in-program enrollments (23.5% of the System) and Miami-Dade has the second largest (18% of the System). Thereafter, the percent gaps widen quickly among these top seven. More than 40% of Hispanic A.S. students attend Miami-Dade with the second largest at Valencia (17.5%). All others have single digit proportions. For the White program enrollments, only 2.7% of the system's White total attend M-DCC. This is clearly the smallest percent for the top quarter of community colleges.

Tables 11 - 63 give detailed statistics on performance for each of the Associate in Science programs presently active at Miami-Dade Community College. These programs are arranged alphabetically by program title. Data for each program include the CIP code, M-DCC program code, cluster membership, program, start year/term, program length, number each for enrollees, graduates, pool, employment in related field, continuing education, placed, as well as the placement rates. The placement rates are calculated from the number placed over the base of the placement pool. The data on continuing education include the number of graduates who may have enrolled in the Florida State University System or another Florida public community college. The Fall Term declarations offer intent data for both the Associate in Science and its counterpart Associate in Arts programs, indicators of interest in the specific program. Notes and footnotes for the programs help to explain changes across time.

Appendices A and B give summary placement status data for each Associate in Science program for the graduates of 1995-96 and 1994-95, respectively.

Methodological Issues

The placement pool excludes six categories of graduates. These are:

1) graduates who could not be found through the Florida Education Training Placement Information Program (FETPIP) tracking, 2) visa graduates, 3) graduates with invalid Social Security number or 4) no Social Security number, 5) disabled graduates who were not successfully placed, and 6) graduates whose job relationship to training was not clear.

The indeterminate nature of relationship to training occurs frequently and is due to the nature of the federal Standard Industrial Classification (SIC) codes applied in the tracking system. In many instances, these SIC codes are far too general to draw conclusions for specific cases. For example, information on a graduate from the Vision Care Opticianry Technology program may be identified in the state automated FETPIP system as working in a retail trade (as Burdines) with no information on the job title. The dilemma for decision-making then becomes - Is this graduate working as a sales associate or in the business office or in the opticianry department or in another capacity? Assumptions are not made and so the graduate is deleted from the placement pool. However, in many cases, FETPIP augments positive placements by automatically assigning a positive value to graduates where 65% of graduates, historically, had a similar SIC code. Job titles are often critical in assisting placement decisions and the existence of these is becoming increasingly rare. The narrow window of time given by the state for verification of data precluded local surveying for the past five years.

However, recent legislation (SB1688) has been instrumental in effecting changes. Implementation of mandates regarding performance-based funding via the Work Force Development project has stimulated due date adjustments, enabling a survey of M-DCC program managers for placements not found through the FETPIP system. The results are reflected in the enlargement of the pool used for calculating placements and in the increase in the number of graduates in training-related jobs.

*From 1988-89 forward, graduates omitted from the placement pool included non-resident aliens, those with invalid social security numbers, disabled graduates without positive placements, and graduates who could not be found. Graduates were not included in the placement pool if their job relationship to training was indeterminate.
**Beginning with graduates in 1992-93, placement data were generated by FETPIP. No local surveys were conducted.
***Beginning in 1993-94, the definition of program enrollee was tightened to include 17 credits earned with 9 of them in the major field.

*From 1988-89 forward, graduates omitted from the placement pool included non-resident aliens, those with invalid social security numbers, disabled graduates without positive placements, and graduates who could not be found. Graduates were not included in the placement pool if their job relationship to training was indeterminate.
**Beginning with graduates in 1992-93, placement data were generated by FETPIP. No local surveys were conducted.
***Beginning in 1993-94, the definition of program enrollee was tightened to include 17 credits earned with 9 of them in the major field.

*From 1988-89 forward, graduates omitted from the placement pool included non-resident aliens, those with invalid social security numbers, disabled graduates without positive placements, and graduates who could not be found. Graduates were not included in the placement pool if their job relationship to training was indeterminate.
**Beginning with graduates in 1992-93, placement data were generated by FETPIP. No local surveys were conducted.
***Beginning in 1993-94, the definition of program enrollee was tightened to include 17 credits earned with 9 of them in the major field.

*From 1988-89 forward, graduates omitted from the placement pool included non-resident aliens, those with invalid social security numbers, disabled graduates without positive placements, and graduates who could not be found. Graduates were not included in the placement pool if their job relationship to training was indeterminate.

**Beginning with graduates in 1992-93, placement data were generated by FETPIP. No local surveys were conducted.

***Beginning in 1993-94, the definition of program enrollee was tightened to include 17 credits earned with 9 of them in the major field.

*From 1988-89 forward, graduates omitted from the placement pool included non-resident aliens, those with invalid social security numbers, disabled graduates without positive placements, and graduates who could not be found. Graduates were not included in the placement pool if their job relationship to training was indeterminate.

**Beginning with graduates in 1992-93, placement data were generated by FETPIP. No local surveys were conducted.

***Beginning in 1993-94, the definition of program enrollee was tightened to include 17 credits earned with 9 of them in the major field.

*From 1988-89 forward, graduates omitted from the placement pool included non-resident aliens, those with invalid social security numbers, disabled graduates without positive placements, and graduates who could not be found. Graduates were not included in the placement pool if their job relationship to training was indeterminate.

**Beginning with graduates in 1992-93, placement data were generated by FETPIP. No local surveys were conducted.

***Beginning in 1993-94, the definition of program enrollee was tightened to include 17 credits earned with 9 of them in the major field.
